

Replacement Cores for Cellular Vintage Style Radiators and Heaters

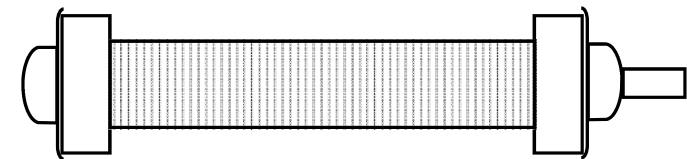

Original heater matrix with 50mm cellular core.

This style of radiator does not have conventional tanks which would fit inside a normal turned up tube plate.

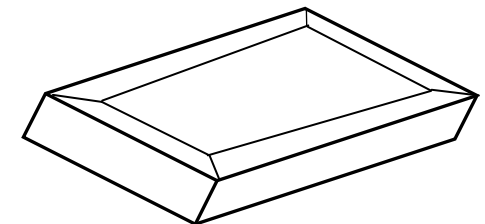

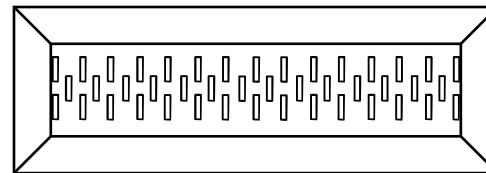

When ordering, all we need is the height, width and depth of original core and we will produce a core which will allow for the replacement box fold style tube plate.

Original 50mm deep core is replaced here with a 3 row "S" pattern which is 44mm deep.

View looking down on to box folds and tube plate of 3 row core.

Actual appearance of box fold type tube plate
